PROFILE

Product designer coming from construction tech. I spent five years in London's built environment, four as a measured building surveyor and BIM coordinator and the last as a project manager at DPR, and kept ending up designing the tools my team was missing. I start from the real workflow, prototype fast in Figma and Claude Code, and test with the people who will use it.

In 2026 I designed and built an internal drawing QA tool that my team piloted on live projects, and won two hackathon challenges: the Accurx challenge with CareLoop and the Engine by Starling challenge with MoonMates.

PRODUCT DESIGN EXPERIENCE

Internal drawing QA tool, Designer and Builder

DPR | Figma, Lovable, Claude | Nov 2025 – Sep 2026

- Researched how drawing QA actually worked and found it wasn't a defined process: feedback ran through Outlook, with no standard for what was checked and no record of who checked it. I measured 2 to 3 hours of admin per project spent re-typing lost feedback.
- Designed a defined set of checks with the record stored against the project, fitted into the CAD workflow people already used instead of adding a new tool. One screen to check, review, import visual feedback and export reports.
- Wireframed and mapped the IA in Figma, prototyped in Lovable and Claude, ran demos at each iteration and changed the design based on team feedback. Piloted with my measured survey team on live projects.
- Designed a phase 2 concept and tested it with a person from outside the industry. Their feedback led to clearer clickable tabs, sortable and filterable columns, back navigation that keeps your place, @mentions and reviewers, and a tree-structured checklist.

Cow Compass, Designer and Builder

Personal project | Paper, FigJam, Claude Code | 2026

- A mobile herd tracker for small farms with patchy signal. Interviewed four farming households in rural Croatia, then sketched, wireframed and built a clickable prototype in Claude Code with offline states and a compass that works without signal.

MoonMates, Product and Design

HuddleHive Hack | Winner, Engine by Starling challenge | Oct 2026

- A shared savings app for friends, built on a mock Engine core and TfL commute data in 24 hours with a team of five.
- Facilitated ideation with a Crazy Eights session and researched the problem from the start, which helped the team narrow down what was worth solving.
- Built the first clickable prototype in Claude Code. The team used it to choose the concept, and its visual language became the product UI. Designed the logo and shaped the PRD-style submission document.

CareLoop, Product and Project Lead

HuddleHive NHS Hackathon | Winner, Accurx challenge | Mar 2026

- Led a team of five from problem to a working AI prototype of a voice-first symptom diary in 24 hours, and built the prototype myself in Claude Code.
- Chose the problem from conversations with the hackathon coordinators, one of them from Accurx, and NHS waiting list data. Patients waiting for care are told to track their symptoms, with nowhere to do it.

Volunteer UX Designer

Nkomor Healthcare | Dec 2024 – Dec 2025

- Sole UX designer for a year. Redesigned a medication platform into a marketplace with two user paths, one for buyers and one for pharmacies, and tested it with the internal team.

PROJECT DELIVERY EXPERIENCE

Project Manager

DPR, London | Mar 2025 – Sep 2026

- Delivered Northumberland House, WC2N, a post-strip measured survey of a 10-storey building, on time and on budget with minimal revision rounds, from fee proposal through to client handover.
- Main point of contact for the client: agreed scope changes, reported on progress and managed expectations. Wrote and negotiated fee proposals up to £50k.

Measured Building Surveyor / BIM Coordinator

DPR & SUMO Services, London | Oct 2021 – Mar 2025

- Four years doing the technical work: measured survey, laser scanning and BIM coordination. Worked directly with client design teams and outside consultants before I moved into project management.
- Wrote AutoLISP scripts to standardise 47+ CAD layers automatically, which removed a manual step people used to get wrong on every project.

SKILLS

Design User research and interviews · journey mapping and user flows · wireframing and prototyping · usability testing · Figma · FigJam

Product Problem framing · PRDs · working closely with engineers · stakeholder and client management · presenting and pitching

Build & AI Claude Code · coded prototypes · building internal tools with AI · process automation

Domain Construction tech · BIM · laser scanning and point clouds · ISO 19650 · AutoCAD · AutoLISP

EDUCATION AND LANGUAGES

Master of Landscape Architecture, University of Zagreb, 2021 · English (fluent), Croatian (native)
