ALEKSANDRA VUGDRAGOVIC

Product Designer | Construction tech

London NW3 · avugdragovic@gmail.com · +44 7729 672124 · linkedin.com/in/avugdragovic · Portfolio: alexvugdragovic.com

PROFILE

Product designer coming from construction, where I've spent five years in London's built environment. I worked as a measured building surveyor and BIM coordinator, scanning buildings on site, processing the data and producing the deliverables. Most recently I was a project manager at DPR, where I owned projects end to end.

Along the way I kept finding processes worth fixing, which is how I started designing and building tools. I design flows, states and edge cases rather than single screens: a mobile herd tracker that keeps working without signal, and Benchmark, a drawing QA tool my team piloted on about 10 live projects. I also won two 24 hour hackathon challenges, with CareLoop and MoonMates, where I was the product designer and my rapid prototyping helped us win.

PRODUCT DESIGN EXPERIENCE

Benchmark, Designer and Builder

DPR internal drawing QA tool | Figma, Lovable, Claude Code | Nov 2025 – Sep 2026

- Replaced drawing QA that lived in Outlook threads, with no standard and no record of which output was checked, with one web checklist my measured survey team piloted on about 10 live projects, built from the teams' own guidelines.
- Designed it to cut an estimated 20% of time per project, based on the 2 to 3 hours of admin I measured going into retyping lost feedback, by keeping the note, screenshot and record next to each check and locking Approve until every check is done.
- Took it from Figma wireframes and IA to a working prototype in Lovable and Claude Code on my own, alongside a full time PM role, and shipped it to my team with a demo and design changes at every iteration.
- Turned a usability test with a person outside the industry into six design changes, such as clearer tabs and @mentions.

Cow Compass, Designer and Builder

Personal project | Figma, Claude Code | 2026

- My family's two bulls escaped in 2024 and were missing for nearly two weeks. Interviews with four farming households in rural Croatia showed the same costs, long searches, damage and stress, and trackers on the market are priced for big commercial herds.
- Designed to turn a search into a short walk: one glance each morning shows whether every animal is safe or which one is out, and a compass leads the farmer straight to it, even with no signal.
- Built a clickable prototype in Claude Code for patchy signal, outdoor use and no time to type: positions show their age, touch targets are large, logging takes ten seconds and syncs later, and fence alerts wait two minutes. Next: testing with farmers and support for shared devices.

CareLoop, Product and Project Lead

HuddleHive NHS Hackathon | Winner, Accurx challenge | Mar 2026

- Won the Accurx challenge by leading a team of five from problem to a working AI prototype of a spoken symptom diary in 24 hours, which I built in Claude Code. Patients speak instead of typing, and the app fills in the GP form.

MoonMates, Product and Design

HuddleHive Hack | Winner, Engine by Starling challenge | Oct 2026

- Won the Engine by Starling challenge with a shared savings app for friends, built in 24 hours by a team of five. Ran the Crazy Eights session and the early problem research, and built the first clickable prototype in Claude Code, which the team used to choose the concept. Its visual language became the product UI, and I designed the logo.

UX Designer

Nkomor Healthcare | Part time | Figma, FigJam | Dec 2024 – Dec 2025

- Sole UX designer as an online medicine store became a marketplace. Redesigned the landing page around two paths, for buyers and for pharmacies, after internal tests showed people didn't know which account they were creating.

PROJECT DELIVERY EXPERIENCE

Project Manager

DPR, London | Mar 2025 – Sep 2026

- Delivered a measured survey of Northumberland House, WC2N, a stripped out 10 storey building, on time and on budget with minimal revisions, managing three outside contractor teams from fee proposal to handover.
- Main point of contact for the client: agreed scope changes, reported on progress and managed expectations. Wrote and negotiated fee proposals up to £50k.

Measured Building Surveyor / BIM Coordinator

DPR & SUMO Services, London | Oct 2021 – Mar 2025

- Four years doing the technical work: measured survey, laser scanning and BIM coordination. Scanned buildings on site with colleagues, processed the data in the office, and worked directly with client design teams and outside consultants.
- Automated setup of 47+ standard CAD layers with AutoLISP, removing a manual step people often got wrong.

SKILLS

Design Interaction design · user interviews · flows, states and edge cases · offline mobile for field workers · web tools

Product Problem framing · PRDs · working with PMs and engineers · stakeholder and client management · pitching

Tools Figma · FigJam · Claude Code · Lovable · coded prototypes · usability testing · AutoCAD · AutoLISP

Domain Construction tech · B2B tools · measured survey · laser scanning and point clouds · BIM · ISO 19650

EDUCATION AND LANGUAGES

Master of Landscape Architecture, University of Zagreb, 2021 · English (fluent), Croatian (native)
